

# Unlock the Power of GenAl with Check Point Software Technologies

## The GenAl Revolution is Already Here

Generative AI applications like ChatGPT and Gemini are here to stay. But as they make users' lives much simpler, they also make your organization's life much harder.

While some organizations have outright banned GenAl applications, according to a Check Point and Vason Bourne study, 92% of organizations allow their employees to use GenAl tools yet are concerned about security and data leakage. In fact, one estimate says 55% of data leakage events are a direct result of GenAl usage.

As tasks like debugging code and refining text can now be completed in a fraction of the time, without the right tools, these very same tasks can put your business data and compliance at risk.

## Conventional Tools Fail to address GenAl Risks

Conventional data protection solutions are not designed to detect and prevent data leakage in generative AI applications, as they rely on static predefined keywords and patterns. They fail to understand the context of unstructured data typical of GenAI prompts, which are inherently conversational.

In fact, to address GenAl risks, you need a GenAl-based solution.

## Check Point lets you Adopt Generative AI Safely

Available as part of our Preview Program, Check Point's GenAl security solution installs in minutes to discover the GenAl services used in your organization, assess their risk, and apply groundbreaking Alpowered data protection so you can adopt the latest services without the added risk.

The solution applies Check Point's transformative AI-powered data analysis to accurately classify conversational data and intent within prompts. Our groundbreaking classification technology understands data context to deliver precision visibility and control, while avoiding the need to define cumbersome data-types.

For example, using its GenAl-powered DLP the solution can distinguish between low-risk, personal content like the acquisition of new running shoes, and high-risk content like the potential acquisition of a company.

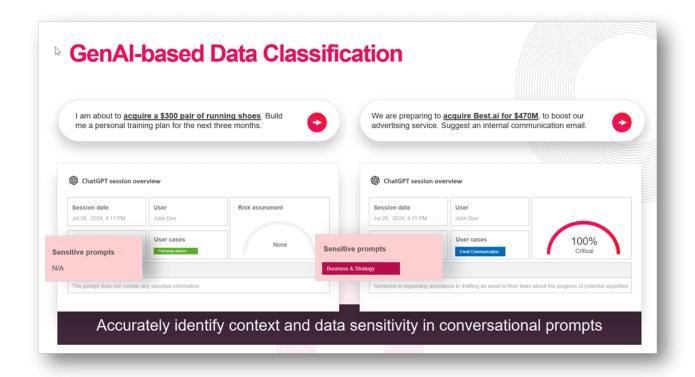

Figure 1: GenAl-based Data Classification in a Next Gen DLP

"Generative AI is boosting enterprise productivity by providing AI assistance in marketing, data analysis and even code development. Unfortunately, employees are exposing enterprises to cyber risk through data loss and intellectual property theft by including confidential information in GenAI apps. CISOs are looking for ways to securely manage the use of GenAI applications across the enterprise", said Frank Dickson, Group Vice President, Security & Trust, IDC. "Through AI and automation, Check Point's new GenAI security capabilities enable enterprises to safely adopt generative AI tools by discovering how GenAI apps are being used, analyze the data being shared, apply a security policy that prevents data loss in real time, and enable visibility and reporting for compliance."

These new capabilities deliver immediate value, empowering organizations to:

#### #1 Discover and Assess GenAl Usage across your Enterprise

Check Point's GenAl security solution lets you uncover both sanctioned and shadow GenAl apps, and provides Al-based visibility into top GenAl use cases, such as coding and marketing, so you can make informed GenAl governance decisions. It also uncovers sources of data copied/pasted into prompts and provides a risk score to prioritize mitigation.

#### #2 Prevent Data Loss in Real-Time and Address Privacy Concerns

The solution lets you enforce customizable policies to prevent data leakage. It even lets you enforce copy/ paste restrictions to prevent the siphoning of data in source code repositories, CRM tools, corporate email and other sensitive applications.

#### #3 Meet Regulations with Enterprise-grade Visibility

Check Point's new GenAl security solution delivers granular monitoring and visibility to facilitate regulatory compliance. It provides visibility into risky user prompts and high-risk Al applications (based on app-specific threat intelligence), and even specifies why a prompt was flagged as hazardous with a detailed description.

### How Check Point's Solution is Different

Unlike other solutions, Check Point lets you:

- Get started in minutes, requiring only a simple browser extension to discover GenAl applications and start creating policies.
- Uncover your top GenAl use cases with innovative Al-based intent discovery, e.g. coding, marketing and email drafting, so you can make informed GenAl governance decisions.
- Leverage GenAI-powered data classification to accurately identify and block sensitive data in AI prompts.

## **Enhancing your Security with Yet Another Layer of Al**

With our latest offering, Check Point is enhancing enterprise security yet again by harnessing the power of AI, adding to AI Copilot which serves as a personal GenAI security assistant, AI Cloud Protect for protecting AI development in the cloud, and ThreatCloud AI for zero-day threat prevention.

## GenAl is here to stay. Check Point is here to make it safe.
